

Self-Propelled Mast Lift

MJP11.5-8100

This Magni vertical self-propelled platform is powered by a battery. It has a light but sturdy structure to be able to work in complete safety.

It has a lifting **capacity of 200 kg** and a **maximum working height of 11 m**. It is an excellent choice for indoor or outdoor maintenance on stable terrain.

The compact dimensions make it easy to pass through narrow doors and enter narrow spaces. The boom, with an oscillation of more or less 70°, and the turret that can rotate through 345° make it highly versatile and easy to operate.

TECHNICAL SPECIFICATIONS

Working load	200 kg
Max. occupants	2 persons
Max. lifting height	11.20 m
Overall length	2.72 m
Overall width	1.00 m
Transmission	Electric
Batteries	24V/30Ah
Weight	2.950 kg
Jib Movement	+70°/60°

- ✓ Automatic protection of the undercarriage
- ✓ Non-marking tyres
- ✓ Side-shift allowed at maximum height
- ✓ Swing out components cover
- ✓ 345° turret rotation
